#### **Dubai Financial Market**

**DFM General Index <.DFMGI> closed at 4,228.74 points.** The index has seen a rebound since late October-2023, supported by its ongoing move within the ascending trend line. Eyes now has shifted towards the critical resistance level at 4,253 point (high of year 2015), which if broken would call for a gradual increase to 4,730 point. However, a sharp move down is not favored but some correction could be seen on the short-term period, knowing that the nearby support levels are located at 4,050 point, 3,930 point but only below 3,730 point would change the tone.

Medium-term and long-term investors can stay in the market with a stop-loss below 3,730 points and 3,450 points, respectively.

# Raed Diab

Vice President +(965) 2233 6908 rdiab@kamcoinvest.com

# **Emaar Properties**

Reuters Ticker: <EMAR.DU>

**Price closed at AED7.490.** The stock remains within the positive territory as it is moving above all MAs on the weekly chart and within the long-term ascending trend line, knowing that above the strong resistance level at AED8.450 is expected to re-activate the buying potential and target AED9.720. However, a fall below AED6.830 could shift the tone towards further weaknesses and lead to AED6.170.

**Emirates Integrated Telecommunications Co.** 

Reuters Ticker: <DU.DU>

**Price closed at AED5.660.** The stock is leaning more towards posting additional gains, while above the horizontal line at AED5.930 would call for an advance to the next layer of resistance at AED6.450. On the counter side, the first line of support comes at AED5.400, knowing that a close below this would most likely trigger a fall back to the critical level at AED4.950, while losing this would lead to AED4.330.

Technical Analysis 2

#### **Aramex**

Reuters Ticker: <ARMX.DU>

**Price closed at AED2.080.** The downside risk remains as the stock continues to move within the descending trend line and below all MAs on the weekly chart. The break above AED2.300 would be the first improvement sign that could increase the upward chances and target AED2.700 before AED3.050. However, losing the recent support line at AED1.930 would reinstate the bearish tone and lead to AED1.500.

**Dubai Investments** 

Reuters Ticker: <DINV.DU>

**Price closed at AED2.360.** The technical picture of the stock is neutral but the move above the support level at AED2.150 and the 200-weeks MA is a positive sign; however, a dip below this would put selling pressure on AED2.040 and a close below it could lead to AED1.800. On the other side, re-gaining momentum above AED2.450 is expected to call for a re-test of the high of last year at AED2.660.

Technical Analysis 3

### **Definitions**

**Technical Analysis:** Aims to identify the direction of prices and reveal any indication of possible changes as soon as possible, so it can be used as much as possible in making buying and selling decisions in the most appropriate time in order to minimize risk and maximize profits.

Trend: The general direction of a market or of the price of an asset.

Resistance: A chart point or range that caps an increase in the level of a stock or index over a period of time.

Support: The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.

Breakout: A signal that prices are beginning to trend, either upward or downward.

Bull: An investor who thinks the market, a specific security or an industry is likely to rise.

Bear: An investor who thinks the market, a specific security or an industry is likely to decline.

Channel: is two parallel trend lines either rising or declining.

Consolidation Area: is a sideways movement in prices that interrupts or reverse a trend.

Moving Average (MA): The most common applications of MAs are to identify the trend direction and to determine support and resistance levels.

MACD (Moving Average Convergence-Divergence): A trend-following momentum indicator that shows the relationship between two moving averages of prices.

Relative Strength Index: A technical momentum indicator (ranges from 0 to 100) that compares the magnitude of recent gains to recent losses in an attempt to determine overbought and oversold conditions of an asset.

**Overbought:** A situation in which the price of a security has risen to such a degree that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.

**Oversold:** A situation in which the price of a security has fallen to such a degree that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors.

Fibonacci: A term refers to areas of support or resistance and to help identify strategic places for transactions to be placed, target prices or stop losses.

On Balance Volume (OBV): is a simple running total of up day (added) and down day (subtracted) volume. If OBV is moving with price, it confirms the current trend. Divergences between OBV and price indicates the price may be due for a reversal.
