Abu Dhabi Securities Exchange

ADX General Index <.ADI> closed at 7,594.349 point. With the higher highs and higher lows and the continued support of all MAs on the weekly chart, the price remains in the positive momentum trend and recoding new history levels. The next overhead resistance level comes at 7,800 point before the psychological line at 8,000 point. On the other side, the weekly RSI indicator is reading above the 85 level, which could lead to some short-term correction, knowing that the nearby support levels come at 7,320 point, 7,000 point and 6,900 point.

Medium-term and long-term investors can stay in the market with a stop-loss below 6,200 point and 5,400 point, respectively.

Abu Dhabi Islamic Bank

Reuters Ticker: <ADIB.AD>

Price closed at AED5.480. As was expected in our last analysis, the break above the horizontal line at AED5.160 was the catalyst of seeing additional gains. Eyes now have shifted towards the critical level at AED5.850, at which the stock could fail to surpass it but a close above it will promote AED6.500. However, back below AED5.160 would change the tone and most likely lead to AED4.600.

Abu Dhabi National Energy Co.

Reuters Ticker: <TAQA.AD>

Price closed at AED1.270. The technical picture has turned cautious as the stock is back below the horizontal line at AED1.310, while additional weaknesses could lead to AED1.070. On the counter side, re-gaining strength above AED1.310 will be a positive sign that should lead to AED1.480 but only above this will increase the chances of re-testing the high of last year at AED1.780.

Technical Analysis 2

Agthia Group

Reuters Ticker: <AGTHIA.AD>

Price closed at AED6.090. The stock retreated after failing to overcome the resistance line at AED7.300, knowing that losing the support level at AED5.600 will deepen the bearish move and allow another slippage to take place to AED5.000. However, a break above the tiny resistance level at AED6.580 will target once again the aforementioned resistance level, but only a firm close above this will confirm a jump to the strong layer at AED9.000.

Ras Al Khaima Properties

Reuters Ticker: <RAKPROP.AD>

Price closed at AED0.692. The overall technical picture is positive as the stock is moving within the ascending trend line and above its MAs on the weekly chart, supported by an increase in trading activity. The next target price comes at AED0.770 before the strong layer at AED0.870. On the other side, a fall below AED0.616 could delay the upward move and trigger AED0.547 and maybe lower to AED0.496.

Technical Analysis 3

Definitions

Technical Analysis: Aims to identify the direction of prices and reveal any indication of possible changes as soon as possible, so it can be used as much as possible in making buying and selling decisions in the most appropriate time in order to minimize risk and maximize profits.

Trend: The general direction of a market or of the price of an asset.

Resistance: A chart point or range that caps an increase in the level of a stock or index over a period of time.

Support: The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.

Breakout: A signal that prices are beginning to trend, either upward or downward.

Bull: An investor who thinks the market, a specific security or an industry is likely to rise.

Bear: An investor who thinks the market, a specific security or an industry is likely to decline.

Channel: is two parallel trend lines either rising or declining.

Consolidation Area: is a sideways movement in prices that interrupts or reverse a trend.

Moving Average (MA): The most common applications of MAs are to identify the trend direction and to determine support and resistance levels.

MACD (Moving Average Convergence-Divergence): A trend-following momentum indicator that shows the relationship between two moving averages of prices.

Relative Strength Index: A technical momentum indicator (ranges from 0 to 100) that compares the magnitude of recent gains to recent losses in an attempt to determine overbought and oversold conditions of an asset.

Overbought: A situation in which the price of a security has risen to such a degree that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.

Oversold: A situation in which the price of a security has fallen to such a degree that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors.

Fibonacci: A term refers to areas of support or resistance and to help identify strategic places for transactions to be placed, target prices or stop losses.

On Balance Volume (OBV): is a simple running total of up day (added) and down day (subtracted) volume. If OBV is moving with price, it confirms the current trend. Divergences between OBV and price indicates the price may be due for a reversal.
