TADAWUL INDEX	1
SISCO	2
YANSAB	2
ALHOKAIR	3
ETIHAD ETISALAT	3

**Tadawul All Share Index <.TASI> closed at 11,171.76 point.** A strong resistance level was formed near 12,000 point on the weekly chart before the market eased down. The bearish tone could continue to the support line at around 11,000 point, while a close below this will allow further loses to 10,590 point. On the positive side, the index is still moving within the ascending trend channel but needs to jump above 12,000 point to decrease the downside risk and call for an advance towards 12,700 point.

Medium-term and long-term investors can stay in the market with a stop-loss below 10,590 point and 9,600 point, respectively.

Saudi Industrial Services Co.

Reuters Ticker: <2190.SE>

**Price closed at SAR29.70.** The stock continues to move down after posting a top at SAR53.00, falling below the 50% level of the Fibonacci Retracements from SAR13.10-SAR53.00 and approaching the next line of defense at SAR28.40 (61.8% level), knowing that a dip below this will deepen the bearish outlook and lead to SAR24.50. However, some attempts to inch upwards could be seen towards SAR33.45 and SAR39.00.

Yanbu National Petrochemical Co.

Reuters Ticker: <2290.SE>

**Price closed at SAR67.20.** The stock saw a noticeable bearish move but the horizontal line near SAR66.00 (also found there the 100-weeks MA) prevented further loses towards SAR61.80 (near the 50% level of the Fibonacci Retracements from SAR38.55-SAR86.50), while further slippage below this will target SAR55.90. On the other side, it's yet hard to predict a reversal move but the price could see some upwards momentum.

Fawaz Abdulaziz Alhokair Co.

Reuters Ticker: <4240.SE>

**Price closed at SAR16.82.** The stock is back to the negative territory and near the strong support level at SAR15.04 (low of last year), which is expected to arrest further fall but a sudden break below it will most likely lead to SAR10.67. However, back above the first resistance line at around SAR20.00 should promote SAR23.90 before SAR26.70, while only above the last one will lead to the strong layer at SAR30.60.

# Etihad Etisalat Co.

Reuters Ticker: <7020.SE>

**Price closed at SAR31.00.** The technical signal will remain positive as long as the stock remains above the support area at SAR27.80-SAR29.20; however, further upward momentum should target SAR34.30, knowing that only above this will call for a positive continuation pattern. On the counter side, a dip below the aforementioned support zone will delay any upward move and lead to SAR25.80.

# **Definitions**

Technical Analysis: Aims to identify the direction of prices and reveal any indication of possible changes as soon as possible, so it can be used as much as possible in making buying and selling decisions in the most appropriate time in order to minimize risk and maximize profits.

Trend: The general direction of a market or of the price of an asset.

Resistance: A chart point or range that caps an increase in the level of a stock or index over a period of time.

Support: The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.

Breakout: A signal that prices are beginning to trend, either upward or downward.

Bull: An investor who thinks the market, a specific security or an industry is likely to rise.

Bear: An investor who thinks the market, a specific security or an industry is likely to decline.

Channel: is two parallel trend lines either rising or declining.

Consolidation Area: is a sideways movement in prices that interrupts or reverse a trend.

Moving Average (MA): The most common applications of MAs are to identify the trend direction and to determine support and resistance levels.

MACD (Moving Average Convergence-Divergence): A trend-following momentum indicator that shows the relationship between two moving averages of prices.

Relative Strength Index: A technical momentum indicator (ranges from 0 to 100) that compares the magnitude of recent gains to recent losses in an attempt to determine overbought and oversold conditions of an asset.

**Overbought:** A situation in which the price of a security has risen to such a degree that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.

**Oversold:** A situation in which the price of a security has fallen to such a degree that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors.

Fibonacci: A term refers to areas of support or resistance and to help identify strategic places for transactions to be placed, target prices or stop losses.

**On Balance Volume (OBV):** is a simple running total of up day (added) and down day (subtracted) volume. If OBV is moving with price, it confirms the current trend. Divergences between OBV and price indicates the price may be due for a reversal.
