#### **Boursa Kuwait**

All Share Index <.BKA> closed at 7,350.37 point. The market still shows promises for further gains, given its close above all MAs on the weekly chart and the continuous move within the ascending trend line. Managing to surpass the recent high at 7,450 point will add more confidence to the outlook and target 7,700 point. On the negative side, the nearby support levels are located at 7,100 point, 6,890 point and 6,760 point but only below this would shift the sentiment towards the bears.

Medium-term and long-term investors can stay in the market with a stop-loss below 6,700 point and 6,250 point, respectively.

Reuters Ticker: <GBKK.KW>

**Price closed at KWD0.297.** No change to the technical picture as the stock maintains a close above its MAs on the weekly chart, while a jump over the resistance zone at KWD0.315 (high of this year)-KWD0.330 (high of year 2019) will confirm another leg up towards KWD0.385. However, back below KWD0.279 could delay the upward move and lead to further weaknesses to KWD0.261.

**Price closed at KWD0.222.** The stock encounters a resistance level at KWD0.233 (high of last year), knowing that a firm close above this would confirm a positive continuation pattern to target KWD0.248 and maybe higher to KWD0.278. On the counter side, a dip below the first support line at KWD0.214 would most likely trigger KWD0.197, which should prevent additional loses to KWD0.162.

Technical Analysis 2

# Agility Public Warehousing Co.

Reuters Ticker: <AGLT.KW>

**Price closed at KWD1.004.** The bias remains positive as the price continues to move within the ascending trend line, while back above KWD1.015 will bring back to focus KWD1.090 (high of last year); however, a successful close over KWD1.090 would open the road for a jump to KWD1.140 and maybe more to KWD1.250. On the other side, a sharp move down is not likely but a fall below KWD0.886 will increase the risk of reaching KWD0.770.

The Commercial Real Estate Co.

Reuters Ticker: <TIJK.KW>

**Price closed at KWD0.125.** The stock could not sustain its upward momentum after posting a temporarily top at KWD0.140 but no signs of reversal has been spotted on the weekly chart, knowing that a dip below KWD0.117 would be the first negative sign that could lead to KWD.108 and maybe lower to KWD0.102. However, only above the horizontal line at KWD0.140 will re-activate the buying potential and lead to KWD0.170.

Technical Analysis 3

### **Definitions**

**Technical Analysis:** Aims to identify the direction of prices and reveal any indication of possible changes as soon as possible, so it can be used as much as possible in making buying and selling decisions in the most appropriate time in order to minimize risk and maximize profits.

Trend: The general direction of a market or of the price of an asset.

Resistance: A chart point or range that caps an increase in the level of a stock or index over a period of time.

Support: The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.

Breakout: A signal that prices are beginning to trend, either upward or downward.

Bull: An investor who thinks the market, a specific security or an industry is likely to rise.

Bear: An investor who thinks the market, a specific security or an industry is likely to decline.

Channel: is two parallel trend lines either rising or declining.

Consolidation Area: is a sideways movement in prices that interrupts or reverse a trend.

Moving Average (MA): The most common applications of MAs are to identify the trend direction and to determine support and resistance levels.

MACD (Moving Average Convergence-Divergence): A trend-following momentum indicator that shows the relationship between two moving averages of prices.

Relative Strength Index: A technical momentum indicator (ranges from 0 to 100) that compares the magnitude of recent gains to recent losses in an attempt to determine overbought and oversold conditions of an asset.

**Overbought:** A situation in which the price of a security has risen to such a degree that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.

**Oversold:** A situation in which the price of a security has fallen to such a degree that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors.

Fibonacci: A term refers to areas of support or resistance and to help identify strategic places for transactions to be placed, target prices or stop losses.

On Balance Volume (OBV): is a simple running total of up day (added) and down day (subtracted) volume. If OBV is moving with price, it confirms the current trend. Divergences between OBV and price indicates the price may be due for a reversal.
