#### In this Report ...

Kuwait Price Index	1
KFH	2
NBK	2
Mezzan	3
NIND	3

**The Price Index <.KWSE> closed at 6,344.77 point.** The market recovered from the support zone at 6,027 point-6,100 point, approaching the resistance level at 6,480 point before it eased down. There could be some consolidation on the coming period until the index escapes from the trading area at 6,240 point-6,480 point, knowing that a close above 6,480 point would validate a positive continuation pattern and target 6,660 point. On the other side, losing the aforementioned support area will re-instate the bearish tone and trigger 5,830 point.

Medium-term and long-term investors can re-enter the market at levels higher than 6,475 point and 6,350 point, respectively.

#### **Kuwait Finance House**

Reuters Ticker: <KFIN.KW>

**Price closed at KWD0.579.** The price saw a noticeable rebound from last month low at KWD0.467 but still moving below this year high at KWD0.650. Some weaknesses could be seen on the short-term period before heading upwards, knowing that the first defense line comes at KWD0.530; however, a dip below it would most likely increase the downside risk towards a re-test of the support level at KWD0.467. On the positive side, a break above KWD0.650 will target KWD0.675.

## **National Bank of Kuwait**

Reuters Ticker: <NBKK.KW>

**Price closed at KWD0.729.** The stock is attempting to gain further strength after it failed to break below the horizontal line at KWD0.690. A cross over the first resistance line at KWD0.760 would promote once again the strong layer at KWD0.800, while a successful close above this is needed to pave the way for KWD0.845 and maybe more to KWD0.890. However, a fall below KWD0.690 will trigger the support level at KWD0.640.

#### Mezzan Holding Co.

## Reuters Ticker: <MEZZ.KW>

**Price closed at KWD0.767.** There could be a scope for a natural upward correction to take place on the short-term period after a prolonged bearish move. The nearby overhead resistance level comes at KWD0.830, while a break above it would promote KWD0.870. However, managing to jump over KWD0.870 will allow a move back to KWD0.955. On the other side, losing the support level at KWD0.740 would allow a re-visit to KWD0.686.

#### **National Industries Group Holding**

Reuters Ticker: <NIND.KW>

**Price closed at KWD0.153.** The current technical picture is positive as the stock sustains a close above its MAs. Eyes now have shifted towards this year high at KWD0.170, which if broken would illustrate a positive continuation pattern and call for a gradual increase towards KWD0.204. On the counter side, the stock has printed a strong support level at KWD0.135, while back below it would delay any upward potential and trigger the next line at KWD0.126.

#### **Definitions**

Technical Analysis: Aims to identify the direction of prices and reveal any indication of possible changes as soon as possible, so it can be used as much as possible in making buying and selling decisions in the most appropriate time in order to minimize risk and maximize profits.

Trend: The general direction of a market or of the price of an asset.

Resistance: A chart point or range that caps an increase in the level of a stock or index over a period of time.

Support: The price level which, historically, a stock has had difficulty falling below. It is thought of as the level at which a lot of buyers tend to enter the stock.

Breakout: A signal that prices are beginning to trend, either upward or downward.

Bull: An investor who thinks the market, a specific security or an industry is likely to rise.

Bear: An investor who thinks the market, a specific security or an industry is likely to decline.

**Channel:** is two parallel trend lines either rising or declining.

Consolidation Area: is a sideways movement in prices that interrupts or reverse a trend.

Moving Average (MA): The most common applications of MAs are to identify the trend direction and to determine support and resistance levels.

MACD (Moving Average Convergence-Divergence): A trend-following momentum indicator that shows the relationship between two moving averages of prices.

**Relative Strength Index:** A technical momentum indicator (ranges from 0 to 100) that compares the magnitude of recent gains to recent losses in an attempt to determine overbought and oversold conditions of an asset.

**Overbought:** A situation in which the price of a security has risen to such a degree that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming overvalued and may experience a pullback.

**Oversold:** A situation in which the price of a security has fallen to such a degree that an oscillator has reached its upper bound. This is generally interpreted as a sign that the price of the asset is becoming undervalued and may represent a buying opportunity for investors.

Fibonacci: A term refers to areas of support or resistance and to help identify strategic places for transactions to be placed, target prices or stop losses.

**On Balance Volume (OBV):** is a simple running total of up day (added) and down day (subtracted) volume. If OBV is moving with price, it confirms the current trend. Divergences between OBV and price indicates the price may be due for a reversal.
