### Dil Market Monthly Report

#### Oil recovers after sliding from two-week highs on supply concerns...

The speculations surrounding talks between the US and Iran moved crude oil prices higher at the start of the week on indications of curbs. Talks continued between the two producers during the week resulting in volatile crude oil prices. Brent crude future prices traded around USD 63/b after declining by more than 5% during mid week but recovered by the end of week to reach USD 65.4/b. The volatility comes after consistent gains at the start of last week following a healthy gain of 4.3% during the previous week led by signs of improving market fundamentals. These gains were mainly led by talks of easing trade tensions between the US and China coupled with expectations of increasing oil demand in China. Supply side factors also supported gains that mainly included sanctions on Russia, Iran and Venezuela. The market also took cues from the softer-than-expected inflation numbers from the US pointing to a relatively smaller economic impact from the tariffs. A relatively weaker greenback vs. historical levels also supported crude oil prices while estimates of higher inventories in the US partially dented the rally.

Production & Capacity	5
Oil Price Forecast	6

Meanwhile, the weekly crude oil inventory report from the US EIA pointed to an unexpected build of 3.5 million barrels during the week ended 9-May-2025 that was much higher than analyst forecasts. This was the biggest weekly increase in inventory since the week of 28-March-2025 that pushed total inventories to 441.8 million barrels, the highest since the week of 18-April-2025. The increase was led by an increase in imports, as per a Reuters report, from OPEC+ countries.

On the demand front, the latest monthly report from the OPEC kept demand growth forecasts unchanged but maintained a cautiously optimistic tone related to trade developments, although the report showed a trimmed economic growth outlook for the world to 2.9% vs. its previous forecast of 3.0% growth. On the other hand, the monthly oil report from the IEA showed that oil demand is expected to slow during the remainder of the year due to economic headwinds. However, the report also noted the positive impact of lower oil prices on overall oil demand. The latest traffic data from China also showed a strong rebound in from the steep drop during the first week of the month.

On the supply side, OPEC crude oil output declined last month to reach 26.7 mb/d, according to data from OPEC secondary sources. The decline was mainly led by lower output from Venezuela, Iran, Nigeria and Libya that was partially offset by an increase in output reported by Saudi Arabia and the UAE. Meanwhile, the trend in oil production in the US remained mixed over the last few weeks owing to lower prices that was also reflected in the data for oil rig count. Production remained elevated at 13.4 mb/d but below the record reached at the end of March-2025.

### Oil Prices

INVEST

KAMCO

Crude oil prices touched the highest level in more than two weeks at the start of last week but failed to sustain the momentum after news that the US President said that they are closer to a deal with Iran. A successful deal would pave the way for Iran to increase oil output which stood at 3.35 mb/d as of April-2025, according to Bloomberg, with a total capacity of 3.83 mb/d, indicating a spare capacity of close to 0.5 mb/d. The declines also came after the weekly oil inventory report from the EIA showed an unexpected build during the week ended 9-May-2025. As per the report, crude oil inventories in the US showed the biggest increase in six weeks to reach 441.8 million barrels. Meanwhile, a survey of oil drillers in the shale patch, quoted by Bloomberg, showed muted sentiments from oil drillers. As per the survey, respondents expect oil prices to trade at current levels by the end of the year at around USD 60/b for WTI.

In terms of monthly price trend, prices of all crude grades witnessed steep declines to reach multi-year low levels during April-2025 reflecting the fears of demand impact from the tariffs imposed by the US government. This was also the third consecutive month of decline in average crude oil prices. Average spot Brent crude oil price declined by 6.6% to reach USD 67.8/b during April-2025, the lowest monthly average in four years as compared to an average of USD 72.5/b during March-2025. On the other hand, average OPEC reference basket price witnessed a slightly bigger decline of 6.8%, the biggest decline in eight months, to reach USD 69.0/b while Kuwait export grade crude prices witnessed a similar decline of 6.7% to average at USD 70.3/b during April-2025. Meanwhile, the consensus estimate for Brent crude showed sharp downward revisions for the next four quarters with some recent forecasts suggesting prices going below USD 60/b this year. The median consensus forecast for brent crude grade for Q2-2025 stood at USD 67.0/b, according to data from Bloomberg, witnessing a downward revision of USD 6/b. Similarly, the forecast for Q3-2025 stood at USD 68/b, revised down by 4.75/b as compared to the consensus last month.

### World Oil Demand

Global oil demand growth forecast for 2025 was kept unchanged by the OPEC in its latest monthly report. The agency expects oil demand to grow by 1.3 mb/d during the year and average at 105.0 mb/d. However, there were adjustments to forecasts for Q1-2025 reflecting actual data for the quarter. The adjustments were mainly made to demand estimates for the US which underwent an upward adjustment of 0.21 mb/d as well as OECD Asia Pacific with an upward adjustment of 0.05 mb/d. These increases were partially offset by downward adjustment to estimates for OECD Europe by 0.05 mb/d as well as 0.25 mb/d downward adjustment to demand estimate for the non-OECD region. Within the non-OECD region, demand estimates for India, China, Middle East Other Asi and Latin America were lowered that were partially offset by upward adjustment to demand forecast for 2025 backed by healthy demand growth in Q1-2025. According to the IEA monthly report, global oil demand growth is expected to come in at 740 tb/d in 2025, a slight upward revision from 730tb/d growth forecasted in the previous month's

report. As per the IEA, demand growth stood at 990 tb/d y-o-y during Q1-2025 but is expected to slow significantly to reach 650 tb/d for the remainder of the year. The forecast for the rest of the year is expected to be affected by economic headwinds as well as record EV sales. The agency said that despite the trade deal with UK and the 90-day accord with China, oil demand is expected o be affected by the increased trade uncertainty that is expected to weigh on the world economy. The forecast for the rest of the year also reflect weaker-than-expected non-OECD delivery data, especially for China and India. Nevertheless, emerging economies are expected to remain the key driver of oil demand growth this year as well as next year, as per the IEA, with an expected demand growth of 860 tb/d this year followed by 1.0 mb/d growth next year. On the other hand, OECD countries are expected to see a demand decline of 120 tb/d this year followed by a decline of 240 tb/d next year. For 2026, the forecast from OPEC showed no change with an expected demand growth of 1.28 mb/d to reach an average of 106.3 mb/d during the year.

### World Oil Supply

Non-DoC liquids supply growth forecast for 2025 was once again lowered marginally by 0.1 mb/d in OPEC's latest monthly report. The supply from the group is expected to grow by 0.81 mb/d this year and average at 54.0 mb/d. The downward revision mainly reflected lowered supply forecast for the OECD region with the US supply growth forecast lowered by 0.07 mb/d vs. previous forecast and is expected to average at 22.1 mb/d. The forecast for the overall Americas region was lowered by 0.09 mb/d, indicating cuts to supply forecast for Canada. The forecast also reflected the latest rig count data from Baker Hughes that showed 10 consecutive weeks of rig count decline in the North America region by the week ended 9-May-

Source: OPEC Monthly Oil Market Report - May-2025

2025. For the US, overall rig count declined last week to reach 578 rigs, the lowest since January-2025. Supply forecast for the overall OECD region was also downgraded by 0.09 mb/d after a marginal downward revision for OECD Asia Pacific. The forecast for the non-OECD region was kept unchanged but there were minimal changes at the country level. Meanwhile, forecasts from the IEA showed that world oil supply is expected to grow by 1.6 mb/d to reach an average of 104.6 mb/d in 2025 mainly led by higher production growth from non-OPEC+ producers that are expected to add 1.3 mb/d in additional supplies this year.

For 2026, non-DoC liquids supply growth is expected to be in line with this year, as per the OPEC. The agency expects supply growth of 0.8 mb/d next year to reach an average supply of 54.81 mb/d after making a downward adjustment of 0.1 mb/d to the yearly forecast. The downward revision once again reflected lowered forecast for supplies from the US partially offset by an upward revision to forecast mainly from Latin America, China and Other Asia regions. As per the IEA, world oil supply is expected to increase by 970 tb/d next year with non-OPEC+ producers expected to increase supply by 820 tb/d and the remaining 150 tb/d of increase is expected to come from OPEC+ producers.

### **OPEC Oil Production & Spare Capacity**

OPEC crude oil production declined for the second consecutive month during April-2025. As per Bloomberg data, average OPEC production stood at 27.24 mb/d during the month, the lowest in three months, registering a decline of 0.2 mb/d as compared to the previous month. The decline was mainly led by lower production reported by Venezuela, UAE, and Nigeria that was partially offset by marginal growth in production mainly in Iraq and Saudi Arabia. Data from Bloomberg showed that OPEC production has declined in four out of the five previous months. On the other hand, data from OPEC secondary sources showed a relatively smaller production decline of 62 tb/d with production averaging at 26.7 mb/d during April-2025. The decline was led by a broad-based fall in production that was partially offset by an increase in production in Saudi Arabia and the UAE.

Production ('000 b/d)	Mar-25	Apr-25	Ch	ange	Capacity	Spare Capacity
Total OPEC-12	27,440	27,240	-200	-0.73%	33,640	6,400

Source: Bloomberg

Output from the broader DoC producers group showed a production decline of 106 tb/d after output from the non-OPEC DoC countries showed an output decline of 45 t b/d during the month. This decline was mainly led by lower output from Kazakhstan and Malaysia partially offset by marginal growth in output from Russia and Oman.

Meanwhile, the OPEC+ announced to increase daily crude oil production by the group by another 411 tb/d for June-2025. This along with the announced increases for May-2025 and April-2025 to around 0.96 mb/d or 43.6% of the 2.2 mb/d in pledged cuts. The IEA expects OPEC+ supply growth of 310 tb/d this year reflecting the unwinding of production cuts followed by an increase of 150 tb/d in 2026.

Oil production in Venezuela declined during April-2025 after US renewed its sanctions on the country. This led to revocation of license issued to oil producer Chevron that produces around 0.2 mb/d of Venezuela's daily output through four joint ventures with the state owned oil company. The sanctions resulted in the company exiting their operations in the country before the 27-May-2025 deadline.

Oil production in Nigeria went below it OPEC+ quota to reach 1.47 mb/d during April-2025. The decline was led by structural issues in production as well as underinvestment in facilities, although the government has recently announced a new target to expand capacity to 2.5 mb/d by 2026.

#### **Disclaimer & Important Disclosures**

Kamco Invest is authorized and fully regulated by the Capital Markets Authority ("CMA, Kuwait") and partially regulated by the Central Bank of Kuwait ("CBK")

This document is provided for informational purposes only. Nothing contained in this document constitutes investment, an offer to invest , legal, tax or other advice or guidance and should be disregarded when considering or making investment decisions. In preparing this document, Kamco Invest did not take into account the investment objectives, financial situation and particular needs of any particular person. Accordingly, before acting on this document, investors should independently evaluate the investments and strategies referred to herein and make their own determination of whether it is appropriate in light of their own financial circumstances and objectives. The entire content of this document is subject to copyright with all rights reserved. This research and the information contained herein may not be reproduced, distributed or transmitted in Kuwait or in any other jurisdiction to any other person or incorporated in any way into another document or other material without our prior written consent.

#### Analyst Certification

Each of the analysts identified in this report, if any and where applicable, certifies, with respect to the sector, companies or securities that the individual analyses, that (1) the views expressed in this report reflect his or her personal views about all of the subject companies and securities and (2) no part of his or her compensation was, is or will be directly or indirectly dependent on the specific recommendations or views expressed in this report.

#### Kamco Invest Ratings

Kamco Invest research is based on the analysis of regional and country economics, industries and company fundamentals. Kamco Invest company research reflects a long-term (12month) target price for a company or stock. The ratings bands are:

- \* Outperform: Target Price represents expected returns >= 10% in the next 12 months
- \* Neutral: Target Price represents expected returns between -10% and +10% in the next 12 months
- \* Underperform: Target Price represents an expected return of <-10% in the next 12 months

In certain circumstances, ratings may differ from those implied by a fair value target using the criteria above. Kamco Invest policy is to maintain up-to-date fair value targets on the companies under its coverage, reflecting any material changes to the analyst's outlook on a company. Share price volatility may cause a stock to move outside the rating range implied by Kamco Invest's fair value target. Analysts may not necessarily change their ratings if this happens, but are expected to disclose the rationale behind their view to Kamco Invest clients.

Any terms and conditions proposed by you which are in addition to or which conflict with this Disclaimer are expressly rejected by Kamco Invest and shall be of no force or effect. The information contained in this document is based on current trade, statistical and other public information we consider reliable. We do not represent or warrant that such information is fair, accurate or complete and it should not be relied upon as such. Kamco Invest has no obligation to update, modify or amend this document or to otherwise notify a recipient thereof in the event that any opinion, forecast or estimate set forth herein, changes or subsequently becomes inaccurate. The publication is provided for informational uses only and is not intended for trading purposes. The information on publications does not give rise to any legally binding obligation and/or agreement, including without limitation any obligation to update such information. You shall be responsible for conducting your own investigation and analysis of the information contained or referred to in this document and of evaluating the merits and risks involved in the securities forming the subject matter of this or other such document. Moreover, the provision of certain data/ information in the publication may be subject to the terms and conditions of other agreements to which Kamco Invest is a party.

Nothing in this document should be construed as a solicitation or offer, or recommendation, to acquire or dispose of any investment or to engage in any other transaction, or to provide any investment advice or service. This document is directed at Professional Clients and not Retail Clients within the meaning of CMA rules. Any other persons in receipt of this document must not rely upon or otherwise act upon it. Entities and individuals into whose possession this document comes are required to inform themselves about, and observe such restrictions and should not rely upon or otherwise act upon this document where it is unlawful to make to such person such an offer or invitation or recommendation without compliance with any authorization, registration or other legal requirements.

Kamco Investment Company (DIFC) Limited ("Kamco Invest DIFC") is regulated by the Dubai Financial Services Authority (DFSA). Kamco Invest DIFC may only undertake the financial services activities that fall within the scope of its existing DFSA licence. This document is intended for Professional Clients or Market Counterparties only as defined by the DFSA, and no other person should act upon it.'

This document may not be distributed in Saudi Arabia except to such persons as are permitted under the Offers of Securities Regulations issued by the Capital Market Authority. The Capital Market Authority does not make any representation as to the accuracy or completeness of this document, and expressly disclaims any liability whatsoever for any loss arising from, or incurred in reliance upon, any part of this document. The recipients of this document hereby should conduct their own due diligence on the accuracy of the information relating to the contents of this document. If you do not understand the contents of this document you should consult an authorized financial advisor.

#### **Risk Warnings**

Any prices, valuations or forecasts are indicative and are not intended to predict actual results, which may differ substantially from those reflected. The value of an investment may go up as well as down. The value of and income from any investment may fluctuate from day to day as a result of changes in relevant economic markets (including, without limitation, foreseeable or unforeseeable changes in interest rates, foreign exchange rates, default rates, prepayment rates, political or financial conditions, etc.).

Past performance is not indicative of future results. Any opinions, estimates, valuations or projections (target prices and ratings in particular) are inherently imprecise and a matter of judgment. They are statements of opinion and not of fact, based on current expectations, estimates and projections, and rely on beliefs and assumptions. Actual outcomes and returns may differ materially from what is expressed or forecasted. There are no guarantees of future performance. Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. This document does not propose to identify or to suggest all of the risks (direct or indirect) which may be associated with the investments and strategies referred to herein.

#### **Conflict of Interest**

Kamco Invest and its affiliates provide full investment banking services, and they and their directors, officers and employees, may take positions which conflict with the views expressed in this document. Salespeople, traders, and other professionals of Kamco Invest may provide oral or written market commentary or trading strategies to our clients and our proprietary trading desks that reflect opinions that are contrary to the opinions expressed in this document. Our asset management area, our proprietary trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this document. Kamco Invest may have or seek investment banking or other business relationships for which it will receive compensation from the companies that are the subject of this document. Facts and views presented in this document have not been reviewed by, and may not reflect information known to, professionals in other Kamco Invest business areas, including investment banking personnel. United Gulf Bank, Bahrain owns majority of Kamco Invest's shareholding and this ownership may create, or may create the appearance of, conflicts of interest.

#### No Liability & Warranty

Kamco Invest makes neither implied nor expressed representations or warranties and, to the fullest extent permitted by applicable law, we hereby expressly disclaim any and all express, implied and statutory representations and warranties of any kind, including, without limitation, any warranty as to accuracy, timeliness, completeness, and fitness for a particular purpose and/or non-infringement. Kamco Invest will accept no liability in any event including (without limitation) your reliance on the information contained in this document, any negligence for any damages or loss of any kind, including (without limitation) direct, indirect, incidental, special or consequential damages, expenses or losses arising out of, or in connection with your use or inability to use this document, or in connection with any error, omission, defect, computer virus or system failure, or loss of any profit, goodwill or reputation, even if expressly advised of the possibility of such loss or damages, arising out of or in connection with your use of this document. We do not exclude our duties or liabilities under binding applicable law.
